DSI LAUNCHES DRM V3.0 WITH MAJOR SECURITY AND PERFORMANCE ENHANCEMENTS

Los Angeles (October 22, 2007) – Bringing a package of improvements to its popular signature product, Dependable Solutions, Inc. (DSI) today announced the release of **Dependable Rights Manager v3.0**. This new version propels the DRM product forward with faster processing, much higher security, improved graphics, stronger development tools and better integration with ERP systems.

Under the hood, DRM v3.0 has major upgrades to bring it fully compliant with ASP.Net v2.0 in a Microsoft SQL Server 2005 database. This gives DRM users a more reliable, faster and more secure solution than ever before.

The DRM tech team has implemented the software according to the Microsoft “Best Practices” recommendations using an N-tiered architecture. The new design allows DSI to separate the Presentation layer, Business rules and Data Access layers to develop quicker reporting and easier customization of the system in each installation. “The new development environment provides a much stronger platform to tailor solutions for diverse client needs with easier maintenance,” says Zeljko Rakocevic, newly appointed chief technology officer for DSI.

DRM v3.0 Benefits Include:

- Enhanced security at both the application level and with standard security modules including encrypted passwords and SSL support
- 30% faster processing, with all reports and databases executed on server, and upgraded back-end optimizing queries
- Better user interface, with drop-down menus replacing the previous file structure menu, giving users 25% more desktop area to view and analyze data, as well as filterable columns, calendars and myriad other features to increase productivity
- Improved technology for better interface with external ERP systems
- New wizards to help users enter contracts, properties, companies, income statements and products
- New file mapping utility to easily configure external sales files into DRM
- Outlook-like company and contact information

“While scalable for all licensing needs, DRM v3.0 allows us to assist larger accounts that require quicker processing on large transaction volumes, reliably supporting more concurrent users company-wide,” explains Marty Malysz, president of DSI.
